

Stormwater Management

- ◆ Stormwater runoff contains debris, chemicals, dirt and other pollutants that need to be filtered prior to the runoff discharging into nearby lakes and streams.
- ◆ Stormwater Management (SWM) features are landscaping elements that help to purify the runoff from pavements, but are also aesthetically pleasing.
- ◆ Some of the SWM techniques being considered for the project are illustrated in the photos on the right.
- ◆ Proposed locations and design approaches are under design.

Micro-Bioretention, Baltimore Inner Harbor

Micro-Bioretention, Towson, MD

Bio-Swale, Seattle, WA

Bio-Swale, Wilsonville, OR

Pervious Pavements in Trails, Crystal Bride Museum, Bentonville, AR

Permeable Pavement in Pedestrian Access Areas, Gott's Court, Annapolis, MD
