

Project Purpose and Need

The purpose of the CCT Project is to enhance intermodal connectivity, mobility, and livability; increase transit capacity; and improve regional air quality by providing premium transit service in the corridor.

The CCT Project would address the following needs:

- ◆ Lack of connections among existing transit routes (including MARC, Metrorail, and local bus network)
- ◆ Existing transit service is near capacity and demand and ridership are forecasted to grow
- ◆ Roadway congestion contributes to unpredictable and slow travel times
- ◆ Need for managed growth and economic development in region
- ◆ Need to support the regional goal of improving air quality by providing alternatives to automobile usage
